Fusaria, which are found throughout the world, are among the most important causes of economic loss in crop yield and quality. Major food and fiber crops of the world are seriously affected by this group of fungi, making quick and certain identification of these organisms vital. This book, the first of its kind, supplies this sorely needed information by providing a practical pictorial guide for identifying Fusarium species. Based on the Snyder-Hansen taxonomic revision of the genus, it details the morphological criteria for identifying the species and the methods for growing Fusarium cultures under standardized optimum conditions. The heart of this large-format volume consists of extremely high quality photographs—including plates in full color—of the distinct spore morphology of each species, together with some of their major variations. The book is designed to help workers readily recognize similarities within species as well as the differences between species, and to compare Fusarium unknowns directly with the illustrations, to aid in rapid identification.

Sitting proudly alongside Sibley, Kaufman, and Peterson, this book contains more than 150 pages crammed full of classic, monochrome plumage art paired with the delightful but dirty aphorisms (think "I'm going to need more booze to deal with this week") that made the Effin' Birds Twitter feed a household name. Including never-before-seen birds, insults, and field notes, this guide is a must-have for any effin' fan or birder.

Japanese Encephalitis (JE), a mosquito borne disease, is the leading cause of viral encephalitis in 14 Asian countries due to its epidemic potential, high case fatality rate and increased possibility of lifelong disability in patients who recover from this dreadful disease. In spite of seriousness of the disease, still only few books are available for ready reference. Hence, this book will be useful for students, entomologists, paramedical staff and vector control managers in public health. The objective of the book is to disseminate the knowledge gained by the author from ecological studies on JE vectors undertaken in 2 endemic and 2 non endemic areas of Northern India over a period of last 15 years (1998-2012) of research in the field of ecology of mosquito vectors of JE virus initially at National Institute of Communicable Diseases (Ministry of Health & Family Welfare, Government of India), Delhi and later at Jamia Millia Islamia, a Central University, Delhi, to anyone who wishes to curtail death of children due to this dreaded disease. Of the thousand suspected JE deaths in India annually, more than 75% is contributed by Northern India wherein disease transmission failed to be explained based on entomological evidence due to inadequate mosquito surveillance tool used in determining JE vector density. In order to overcome the above problem, Dr Bina Pani Das, the author of this book, developed “BPD hop cage method”, a simple, cost effective, and operationally feasible surveillance tool specially designed to capture predominantly day resting adult Cx. tritaeniorhynchus mosquitoes, the principal JE vector species in the country from land and aquatic vegetation.

Although there are a number of books in this field, most of them lack an introduction of comprehensive analysis of MS and IR spectra, and others do not provide up-to-date information like tandem MS. This book fills the gap. The merit of this book is that the author will not only introduce knowledge for analyzing nuclear magnetic resonance spectra including 1H spectra (Chapter 1), 13C spectra (Chapter 2) and 2D NMR spectra (Chapter 3), he also arms readers systematically with knowledge of Mass spectra (including EI MS spectra and MS spectra by using soft ionizations) (Chapter 4) and IR spectra (Chapter 5). In each chapter the author presents very practical application skills by providing various challenging examples. The last chapter (Chapter 6) provides the strategy, skills and methods on how to identify an unknown compound through a combination of spectra. Based on nearly 40 years researching and teaching experience, the author also proposes some original and creative ideas, which are very practical for spectral interpretation.

This beautifully illustrated and updated guide to the spider families and genera north of Mexico is an indispensable reference for both amateur naturalists and professional arachnologists. It provides keys to over 600 genera in 71 different families. Originally printed in 1987, is designed for the cultural historian, archaeologist, the bottle collector, and those just interested in pharmacopoeia. This book is a guide to the identification of the embossed, patent and proprietary medicine bottles produced in an era of American history when anything could be bottled, advertised and sold - legally. A cornucopia of cures, bitters, tonics, and balms, many of them little and slightly disguised alcohol, were available to the gullible but willing public. Not only are the embossed and shapely bottles of this era highly collectable today, they are also valuable to archaeologists who interpret and date historical sites. This book has been designed as a reference book. It provided detailed descriptions to aid the researcher in identifying and evaluating whole or fragmented vessels. A discussion of the patent and proprietary medicine years, and the innovations applied to the production of glass, is followed by a brief interpretation of bottles by color, design and shape. Over 40 chapters detail nearly four thousand medicine bottles. Numerous line drawings, and color photographs will aid the researcher/collector/anthropologist in the identification process. Richard Fike, is a retired Bureau of Land Management Archaeologist. Rich is also an historian, writer, teacher and the developer of the Museum of the Mountain West of Montrose, Colorado. He continues to expand the Museum, which contains original and recreated historic buildings that house extensive collections of America's past. He has combined his professional knowledge and his personal interest in historic bottles to provide this authoritative, definitive, and entertaining guide. This third edition builds on the international success of previous editions, offering an easy access critical introduction to social science theories of identity, for advanced undergraduates and postgraduates. All of the previous chapters have been updated and extra material has been added where relevant, for example, on globalization. Two new chapters have been added; one addresses the debate about whether identity matters, discussing, for example, Brubaker; the second reviews the postmodern approach to identity. The text is informed by relevant topical examples throughout and, as with earlier editions, the emphasis is on sociology, anthropology and social psychology; on the interplay between relationships of similarity and difference; on interaction; on the categorization of others as well as self-identification; and on power, institutions and organizations. A practical and expertly illustrated field guide to over one hundred grasses, sedges, and rushes "No one will be able to claim that the identification of grasses, sedges, and rushes, which are of fundamental importance both environmentally and economically, are simply 'too difficult' after they have learned to use this excellent guide."--Peter Raven, President Emeritus, Missouri Botanical Garden This elegant and easy-to-use guide is an updated and amended revision of Lauren Brown's seminal Grasses: An Identification Guide, which was first published in 1979. While maintaining the spirit and goals of the original edition--a portable, straightforward, and user-friendly guide for naturalists and plant enthusiasts--the new edition features more than one hundred grasses, sedges, and rushes that are presented with line drawings and color photographs, concise descriptions, and details on the uses of various plants throughout history. In addition, the authors are careful to highlight the subtle differences in similar species to avoid confusion, as well as offering relevant notes on plant survival strategies, invasiveness, and how different plants fit within the broader ecological landscape. Devoid of technical jargon, this volume is an indispensable tool for those curious about the often-overlooked grasses, sedges, and rushes that surround us. And the astounding adaptations and strategies they have developed to maximize their chances of becoming a butterfly or moth are only just beginning to be understood, from the Spicebush Swallowtail caterpillar that resembles a small snake to the Eastern Carpenter Bee Hawkmoth caterpillar that attempts to dissuade potential predators by looking like a diseased leaf. The Book of Caterpillars unveils the mysteries of six hundred species from around the world, introducing readers to the complexity and beauty of these underappreciated insects. With the advent of high-quality digital macrophotography, the world of caterpillars is finally opening up. The book presents a wealth of stunning imagery that showcases the astonishing diversity of caterpillar design, structure, coloration, and patterning. #1 NEW YORK TIMES BESTSELLER • Brené Brown has taught us what it means to dare greatly, rise strong, and brave the wilderness. Now, based on new research conducted with leaders, change makers, and culture shifters, she's showing us how to put those ideas into practice so we can step up and lead. Look for Brené Brown's new podcast, Dare to Lead, as well as her ongoing podcast Unlocking Us! NAMED ONE OF THE BEST BOOKS OF THE YEAR BY BLOOMBERG Leadership is not about titles, status, and wielding power. A leader is anyone who takes responsibility for recognizing the potential in people and ideas, and has the courage to develop that potential. When we dare to lead, we don't pretend to have the right answers; we stay curious and ask the right questions. We don’t see power as finite and hoard it; we know that power becomes infinite when we share it with others. We don’t avoid difficult conversations and situations; we lean into vulnerability when it’s necessary to do good work. But daring leadership in a culture defined by scarcity, fear, and uncertainty requires skill-building around traits that are deeply and uniquely human. The irony is that we’re choosing not to invest in developing the hearts and minds of leaders at the exact same time as we’re scrambling to figure out what we have to offer that machines and AI can’t do better and faster. What can we do better? Empathy, connection, and courage. It’s time to start. Four-time #1 New York Times bestselling author Brené Brown has spent the past two decades studying the emotions and experiences that give meaning to our lives, and the past seven years working with transformative leaders and teams spanning the globe. She found that leaders in organizations ranging from small entrepreneurial startups and family-owned businesses to nonprofits, civic organizations, and Fortune 50 companies all ask the same question: How do you cultivate braver, more daring leaders, and how do you embed the value of courage in your culture? In this new book, Brown uses research, stories, and examples to answer these questions in the no-BS style that millions of readers have come to expect and love. Brown writes, “One of the most important findings of my career is that daring leadership is a collection of four skill sets that are 100 percent teachable, observable, and measurable. It’s learning and unlearning that requires brave work, tough conversations, and showing up with your whole heart. Easy? No. Because choosing courage over comfort is not always our default. Worth it? Always. We want to be brave with our lives and our work. It’s why we’re here.” Whether you’re new to Daring Greatly and Rising Strong or you’re new to Brené Brown’s work, this book is for anyone who wants to step up and into brave leadership.

The advance of identification technology-biometrics, identity cards, surveillance, databases, dossiers-threatens privacy, civil liberties, and related human interests. Since the terrorist attacks of September 11, 2001, demands for identification in the name of security have increased. In this insightful book, Jim Harper takes readers inside identification-a process everyone uses every day but few people have ever thought about. Using stories and examples from movies, television, and classic literature, Harper dissects identification processes and technologies, showing how identification works when it works and how it fails when it fails. Harper exposes the myth that identification can protect against future terrorist attacks. He shows that a U.S. national identification card, created by Congress in the REAL ID Act, is a poor way to secure the country or its citizens. A national ID represents a transfer of power from individuals to institutions, and that transfer threatens liberty, enables identity fraud, and subjects people to unwanted surveillance. Instead of a uniform, government-controlled identification system, Harper calls for a competitive, responsive identification and credentialing industry that meets the mix of consumer demands for privacy, security, anonymity, and accountability. Identification should be a risk-reducing strategy in a social system, Harper concludes, not a rivet to pin humans to governmental or economic machinery.
